Less guesswork. More smart work.

Artificial intelligence (AI) is revolutionizing the world and becoming a powerful force in shaping the way we live and work. At UL Solutions, we embrace the latest technologies and work to empower our customers to do what they do best: faster, better and smarter. We are committed to relentless innovation, guided by the belief that data doesn't just inform your decisions; it shapes the technology that drives your business forward.

In pursuit of this mission, UL Solutions is continuously modernizing its digital platforms and optimizing our ULTRUS™ software portfolio to best support your business's goals. We are thrilled to present our latest AI capabilities and have more exciting features coming soon.

Shine a light on the possibilities

Every industry has challenges. From retailers managing in-store returns to suppliers registering products in the point of sale (POS) system. Daily tasks like staying ahead of regulatory changes for chemicals or enhancing the content in your learning management system (LMS) can be time-consuming.
So, we're supercharging our ULTRUS software offerings with AI to help make some of these processes more automatic while fostering intuitive collaboration between the technology and your team.

The strategic application of AI across our ULTRUS software portfolio helps create competitive advantages in numerous domains, such as compliance, research and design, product stewardship, enterprise sustainability, workforce training and more.

Aligning your organizational goals with the assistance of AI can lead to many positive outcomes:

Find what you need faster

Enhance employee productivity

Transform workflows

Improve business processes

Up-skill workforce

Spur innovation

3

Transform old processes and become more competitive in the global marketplace

AI can help you quickly simplify complex retailer program rules or dynamic regulatory landscapes. Automate content and quiz creation using generative artificial intelligence (GenAI) to "read" suggested material and automatically turn it into practical workforce training with the click of a few buttons. Accelerate project timelines such as your energy transition program with advanced AI models that can help pinpoint the best location for a wind turbine based on turbulence intensity.

Discover how we are driving continuous innovation in our AI-enhanced software to help you meet your business goals.

Product
- Insights for product innovation
- Gain and keep market access
- Mitigate financial risks
- Reduce cost to innovate

People
- Employee efficiency in decision making
- AI-augmented workforce gets more done
- Performance benchmarking

Planet
- Improved sustainability
- Reduced emissions
- Carbon footprint management

And more. The potential of AI is almost endless and can be tailored to suit your particular tasks, industries and user preferences.

Other AI use cases:
- Product registration assistant
- Basic waste, storage and transport data for products with limited information
- AI synthetic turbulence intensity for wind and energy
- Automated understanding of chemical regulatory changes
- LearnShare training task automation

UL Solutions

Keep your data in-house

Imagine an AI that knows your business as well as you do. How businesses operate is changing, but safety and security are still top concerns. Our AI tools are trained in a closed loop to keep your data in an isolated environment. You can also program them with your company's unique information, operational nuances, goals and privacy concerns.

This way, you have peace of mind knowing that your data is always yours and not coming in from elsewhere. It's also not being shared to provide value to other companies or vice versa. Our customers also have access to our award-winning programs and proprietary learning models trained by UL Solutions subject matter experts (SMEs), who can also provide guidance on meeting your specific industry needs.

Key benefits

Backed by the 130-year industrial heritage of UL Solutions
Prescriptive and predictive insights to solve for compliance, safety and sustainability challenges

Explainable AI
Generative AI with explainability for greater confidence to execute on AI recommendations

Intuitive and intelligent
Modern cloud-enabled architecture with generative and core AI/ML

Customer-centricity delivers outcomes
Value and benefits that help teams coordinate, collaborate and innovate

Extensible and accessible AI
Enterprise-grade software solving integrated use cases with open APIs

Zero trust cybersecurity
Foundation to prevent and detect threats
